

Unify your Data with Real-Time Reporting

Highlights

Pull data from multiple data sources into real time reports

Graphical Eclipse design interface with drill down filtering capabilities

Build customized reports and graphical dashboard metrics

View reports in JSR 168 compliant enterprise class portals

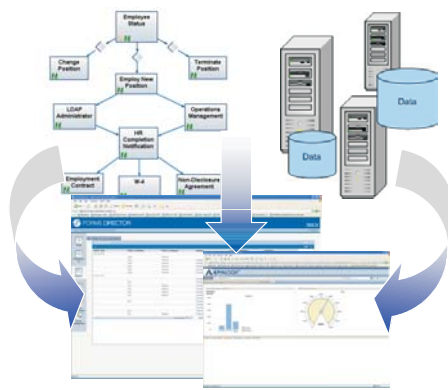

Export report data to Microsoft Excel or print from Tasica Dynamic Reports

Receive a birds-eye-view of your company's business processes at a moments notice

Integration with Tasica Forms Director provides a powerful way to unify data sources with electronic workflow data

Many businesses maintain their IT infrastructure with a wide variety of data stored in countless amounts of databases connected to many different applications. In order to monitor data from these disparate sources without using tools for each application, organizations need Tasica Dynamic Reports to unify their infrastructure for real time management and effective business process monitoring.

Whether it is specific to departmental processes such as Human Resource employee expenses, company wide such as in Construction for equipment tracking or a combination of both, Tasica Dynamic Reports is the paperless solution for all your company's reporting needs.

Robust Data Unification

Tasica Dynamic Reports is a custom reporting application that pulls data from multiple data sources into customized reports and dashboard metrics allowing management personnel to see how everyday business processes are running in real time.

As a highly robust, data centric reporting solution, any member of your business can conceptualize and design reports from any data source including business logic based, electronic workflow data, and information from any relational database including Microsoft SQL, IBM DB2, MySQL, Oracle and many others.

Point and Click Customization

In an Eclipse open standard integrated development environment, designers can customize reports to suit their unique needs. Filtering options within the design environment allow data to be viewed in a combination of perspectives allowing effective and efficient reports that clearly depict top line figures.

Dynamic Administration for a Bird's Eye View

Permission based rules allow certain members of your organization rights to view customized reports either in an online web browser or enterprise applications such as any JSR 168 compliant portal. Reports can also be exported to Microsoft Excel for further visual definition or printed directly from Tasica Dynamic Reports.

Extend the Power of Electronic Forms and Workflow

Extend the value of the Alphalogix Business Process Automation Solution comprised of Tasica Forms Director and IBM® Lotus® Forms with Tasica Dynamic Reports and monitor electronic workflow data along side data from any other relational data source. Organize business processes and edit all electronic forms, workflow and reports side by side in the same open standard Eclipse design interface. With this powerful collaboration, businesses can easily unify their infrastructure, implement decisions and shape their business models and workflow processes with little to no formal IT training.
