Forms Director

Leading the way in Human Centric Workflow Solutions for Enterprise Portals

Looking for a way out of manual or email based workflow?

Improve your daily business operations with Tasica Forms Director, a human centric workflow solution that allows employees with no formalized IT training to use a point-and-click, graphical interface to create dynamic and efficient web-based, self-service applications for portal environments.

Solution Highlights

- Create web-based, self-service applications for enterprise portal environments
- Reduce operational costs and corporate carbon footprint
- Build applications for any industry including General Business, Retail, Government, Healthcare and Insurance
- Apply simple or complex workflow rules to electronic forms
- Point and click, drag and drop workflow design
- Supports XML open standard electronic form formats,
- Integrates seamlessly with existing infrastructures for
- Integrate with corporate directories and databases
- Out of the box workflow monitoring
- Integration with dashboard and content management technologies

Let Your Information Direct Itself

Forms Director leverages the open standard Eclipse development platform and XML open standards such as XForms, maximizing the value of electronic form authoring tools and futureproofing the electronic forms and workflows to prevent them from becoming obsolete.

Designers can customize workflows with the ability to alert colleagues of their action items or approval steps. Forms can be routed based on conditions or variables in an electronic form or previous steps. Forms Director can also route to databases and document repositories.

With the Tasica Forms Director Portlet Pack, Forms Director can integrate with any enterprise class portal, allowing users to receive, monitor and complete action items within their corporate or role-based portal.

Tasica Forms Director also empowers organizations with dynamic administration for business process automation. Out of the box workflow monitoring allows a bird's-eye view of overall business process efficiency. For businesses seeking a more dynamic workflow reporting, Forms Director can also integrate with Tasica Dynamic Reports, driving real time customized reports of workflow data from multiple workflows.

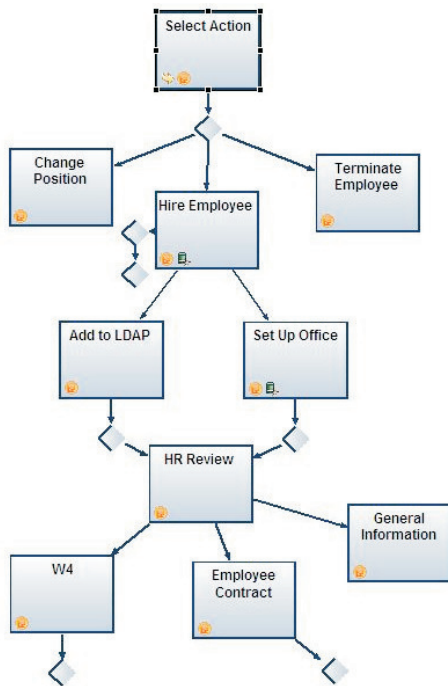

Created with the enterprise customer in mind, Forms Director integrates seamlessly with existing infrastructure for directories, databases and portal, so there is no limit in choice in software, operating system or computing platform.

Effective Business Solutions

Tasica Forms Director reduces operational costs by applying logical decisions and workflow rules to electronic form and eform data with absolutely no coding.

Forms Director can enhance general business operations such as HR, Accounting, Sales and Marketing process. Apply Tasica solutions for specific enterprise portal applications for industries such as Retail, Government, Healthcare and more!

Workflow at the Click of the Button

Pictured Above: HR Employee Management Workflow Diagram.

With Forms Director:

- Create or edit logic based electronic forms routing using a wizard driven graphical interface
- Free up IT development time with no coding workflow design
- Monitor on-going action items
- Delegate actions to a colleague via directory integration
- Create real time reports of workflow data and status
- Concurrently run multiple workflow tasks
- Write information from electronic forms to a database
- Create infinite levels of decisions simultaneously with any of the actions listed above
